

Adeo Screen: at the forefront in the projection screen sector for over 2 decades now.
Present on the international market since 2007, Adeo Screen saw its business increase considerably after investing in production facilities in Zlotoryja (Poland), with 3500 sqm between factory and warehouses and 1000 sqm of offices and showroom.
The Company soon established itself on the European market as a leading manufacturer of high-quality projection screens, founding its activity on few solid principles - research and design first and foremost -, to offer cutting-edge technology, always.
All our production processes are followed with the greatest care and attention. Our products are tailored to meet the actual needs of our customers, who can also rely on efficient pre- and post-sales support.
Adeo Screen is also attentive to product safety: each screen is accompanied by CE certification and by fireproof canvas classifications.
Our wide range of products, from motorized to fixed screens in various configurations, to projection surface solutions for rental and service applications, constitutes an offer of proven quality with constantly updated technological features.
With its comprehensive range of professional applications and of home-theatre solutions for private use, Adeo Screen sets itself as one of the leading brands of projection screens on the international market.

Quality System

CE Declaration of conformity

The Adeo Screen Quality System is based on a program specifically developed to manage the entire production process.

Step by step: starting from the choice of its raw materials, every single screen - whether standard or personalized - is “accompanied” through each working phase. Owing to this type of organization, the activities of each sector of the production line are constantly monitored, enabling the most suitable and efficient intervention if the need arises. Automation ensures precision and punctuality, from the models’ CAD/CAM designing to the plotter-cutting of the surface. But the human element also plays an important role: the work of each sector is in fact carefully supervised by a specialized technician. Finally, the roller screens must overcome one last obstacle: once they are assembled, they are individually mounted on a test platform, for definitive adjustments and quality testing.
The finished products can now be marketed with a guarantee seal. Even packaging has been customized to suit the characteristics of each model and to protect its quality.

A hurdle race where only the best cross the finish line and can boast the Adeo Screen mark.

adeo RoHS compliant

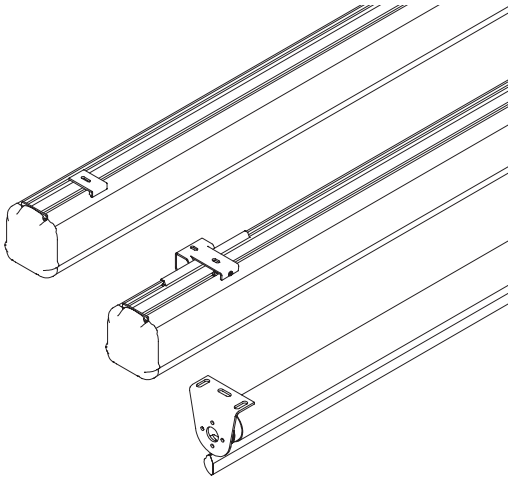

DESIGNED IN ITALY MADE IN EU

PSS Personal Screen System

Personal Screen System is one of the distinctive features offered by Adeo Screen. The system proposes screens which can be constructed to suit the customer's specific requirements, allowing the greatest possible personalization of the product. Each of the various models of the range presents a basic profile: through the PSS the characteristics of the models can be modified and customized, since each of them is available in several variants: from the base model it is therefore possible to obtain more than 50 million combinations.

Case

The case is the structure that protects the surface from gathering dust once is has been rolled up. Screens can be produced with or without a case. The former can be installed with the standard procedure (which favours the aesthetic aspect and a harmonious visual impact by significantly reducing the visibility of the wall-mount bracket), or with a time-saving procedure (this consists of quick and easy operations, and is ideal for professional applications). The range of models without a case (Basic) responds to special installation requirements (such as the presence of recesses, beams or space limitations).

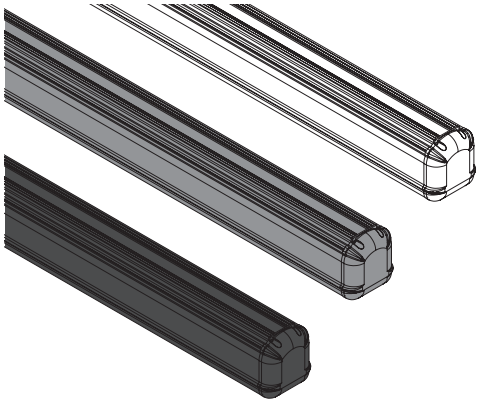

Standard Case

Quick Installation Case

Without Case (Basic)

Color of the case

Standard is always white, optional in black or custom color. The varnishes used are free of toxic substances, in compliance with the latest applicable norms on environmental protection.

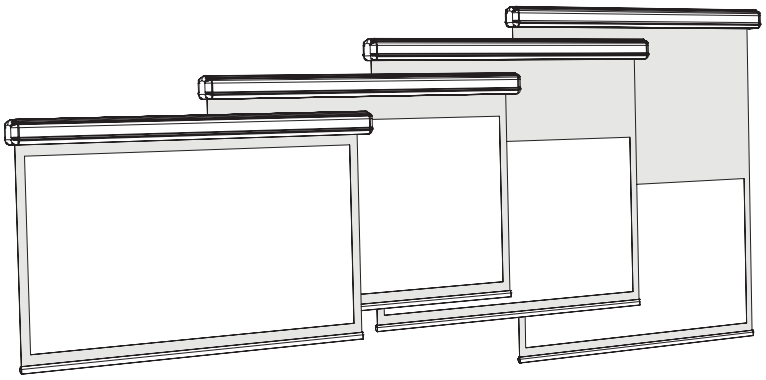

White

Custom color

Black

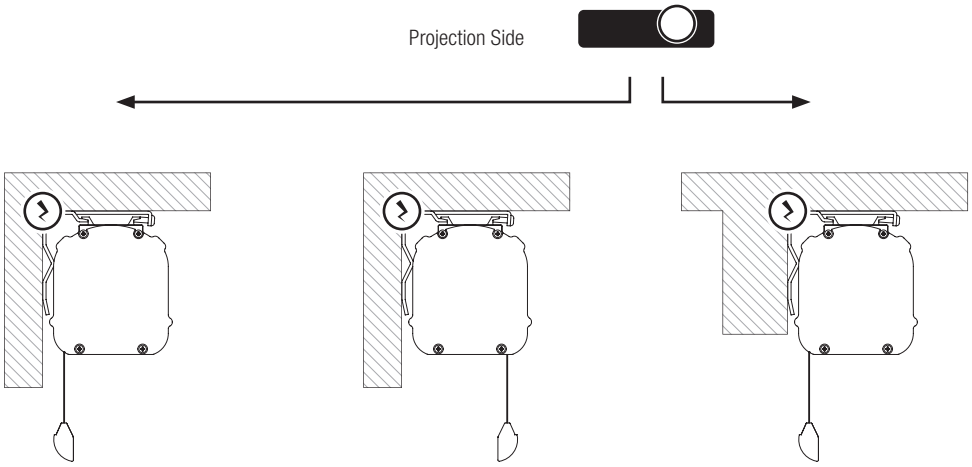

Height of the drop

Adeo has foreseen the possibility of providing projection surfaces with dark edges and tensioned screens with an optional top, which can be standard (for the sizes and options available for each format see the model's reference table) or personalized. In the personalized version, height can vary from 5 to 140 cm (in multiples of 5 cm), based on type of screen, clear opening ratio and the size limits of each model. The top is applied in ceiling-mount installations in order to place the clear opening height in the desired point, positioning the surface in an optimal manner with respect to the projector.

Surface fall

The projection surface can be unrolled from the front (in particular in the presence of obstacles on the wall) or from the back. The choice of either option will result respectively in a greater or smaller distance between the surface and the wall.
It's also available the Reverse-roll option.

Back fall

Front fall

Reverse-roll option

Type of roller

There are two types of screen roller mechanisms: motorized and motorized with radio integrated receiver.
The first type is based on a tubular motor activated by a standard wall-mounted up/down dead man selector switch.
The second is characterized by a motor with integrated receiver unit and remote control.

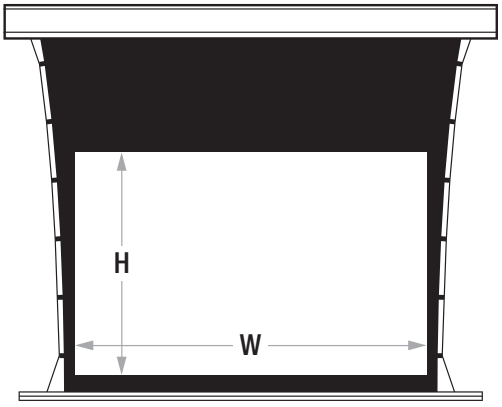

Motor/command side

The motor/command can be positioned on the right- or left-hand side of the case. In motorized screens this option is useful for bringing the wiring closer to the existing electrical system.

Personalized dimensions

To design a video system correctly, it is necessary to identify the optimal screen size for every single application. Specific conditions of the projection environment may require the building of a model with dimensions (width and height) customized to the millimeter. With Adeo this option is possible, subject to the respect of geometrical parameters and the need to retain the quality of the final projection.
Three variables must be considered to obtain the best results: the distance between the screen and the furthest spectator (D), the type of application (presentation from PC, graphics, home theatre, etc.), and the aspect ratio. To make the size of the screen independent from the chosen aspect ratio, the screen's height (H) is considered. Unlike the screen's width (W), its height remains the same regardless of the aspect ratio chosen.
Depending on the various use contexts, the height (H) is calculated by means of the following formulas:

- Presentations from PC: H=D/6
- Graphics/tables/drawings: H=D/4
- Home Theatre with HD resolution or upconverted SD resolution: H=D/3.3
- Home Theatre with Full HD resolution: H=D/2.5

In order to obtain the respective width (W) of the screen you just multiply the resulting height (H) by the chosen aspect ratio (1.33, 1.78, 1.85, 2.35 etc.).
N.B: in Home Theatre applications, the D stands for the distance between the screen and the main spectator (sweet spot).

Reference White 2

White surface for front projection

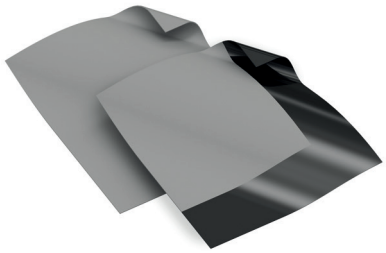

Reference White 2 is a new improved material designed for those applications that require exceptional color accuracy at all viewing angles. Thanks also to the absence of hot spot effect, it is perfect to be used in a home-theatre or a professional studio. Recommended for controlled light environments.

Reference White 2 Acoustik

White surface for front projection

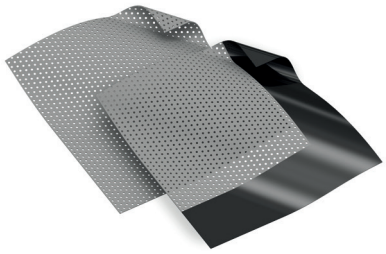

Micro perforated version of our Reference White 2. Perfect for all applications that require exceptional color accuracy at all viewing angles. Thanks to the micro holes of 0.5 mm is the ideal choice for installations with sound sources placed behind the screen. Characterized by the absence of hot-spot effect, it is perfect for use in hometheater installations or professional studios. Recommended for controlled light environments.

Reference Grey 2

Grey surface for front projection

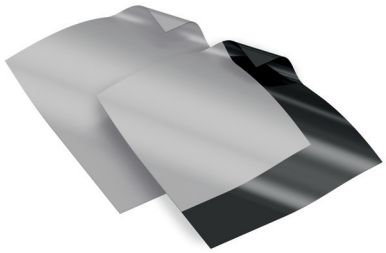

Reference Grey 2 is a new improved material designed for installations in rooms with bright walls and some ambient light. It maintains it's faithful color accuracy at all viewing angles while improving the black level of fixed-matrix video projectors. All these characteristics makes it also compatible with Ultra-Short Throw (UST) and Short Throw (ST) installations.

Reference Grey 2 Acoustik

Grey surface for front projection

Micro perforated version of our Reference Grey 2. Thanks to the 0.5mm holes that makes it acoustically transparent, it's ideal in installations with sound sources placed behind the screen. Designed for use in environments with bright walls and some ambient light, like the non-acoustically transparent version, it maintains color accuracy at all viewing angles, improving the black level of fixed matrix projectors. All these characteristics makes it the best with Ultra-Short Throw (UST) installations.

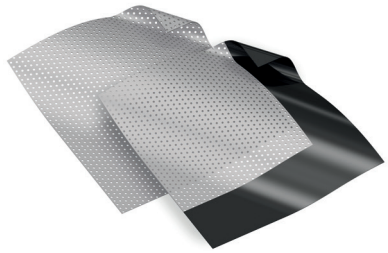

Ambient Grey 2

Grey surface for front projection

New ambient light rejecting (ARL) surface that has been refined to improve the color uniformity and the depth of the projected image. It is our best surface for applications with presence of ambient light. This fabric can also be used with Short Throw (ST) projectors.

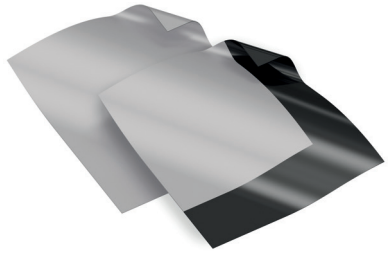

Projection Surfaces

Ambient Grey 2 Acoustik

Grey surface for front projection

Acoustically transparent version of our best ambient light rejecting (ALR) surface, with great color uniformity and depth of the projected image. This fabric can be used as well in combination with a Short Throw (ST) projector, but not with an Ultra-Short Throw (UST) one.

Ambient Grey

Grey surface for front projection

Ambient Grey surface is designed to be used in applications with the presence of ambient light or in rooms with bright colored walls. This screen material achieves the best video performance with high brightness Home Theater projectors, and is also suitable to be used in Ultra-Short Throw (UST) and Short Throw (ST) applications, maintaining excellent black levels and perfect color uniformity.

Vision White

White surface for front projection

Vision White represents the top in terms of projection surface quality, guaranteeing perfect planarity, for optimal image reproduction even on very large screens, and excellent light diffusion, by effect of the special embossing of the projection surface. The wide viewing angle, high luminosity, absence of hot-spot effects and exceptional uniformity of colour have made it the benchmark surface of the Adeo range. Owing to its versatility it can be used in different contexts, from professional applications (also in the presence of ambient light) to high definition home theatre systems (recommended for environments with dimmed light).

Vision White Pro

White surface with black back for front projection

The Adeo range also includes a laminated surface, especially designed for critical situations where the screen is positioned in front of a source of light.

By blocking out the light, the black back guarantees unimpaired projection. This projection material is particularly suitable for small and medium-sized screens. Note that in any case the surface should not be used to shield the sunlight. This would result in a damage and a consequent loss of planarity.

Video projection screens are not designed to be installed in front of windows, near strong sources of light, or at direct sunlight, near heat sources as heating stoves, fireplaces, flues or air conditioning systems for both warm and cold air.

Vision Acoustik

White surface for front projection

The diam. 0.5 mm micro-holes punched all over the surface render this projection material “acoustically transparent”, so that the sound source can be positioned behind the screen without compromising the audio standard. Devised especially for high definition home theatre applications, Vision Acoustik reduces the loss of luminosity typical of traditional perforated surfaces owing to the use of micro-holes, whose significantly smaller diameter guarantees the absence of hot-spot effects at the centre of the screen.

Vision Macro Acoustik

White surface for front projection

Like Vision Acoustik, this surface is also perforated with micro-holes (diam. 1.3 mm) which render it “acoustically transparent”, so that the sound source can be positioned behind the screen: a perfect localisation of the projected image and of the sound source is thus obtained. Its application, however, is different: MacroAcoustik has been devised especially for large-size screens, and again for avoiding the hot-spot effect.

Vision Rear DB

Surface for front and rear projection

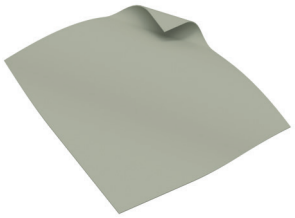

This innovative screen material is designed to be used in both front and rear projection application. It can be used also in applications that requires to continuously switch between front and rear projection by electronically inverting image on vertical axis. It offers extremely wide viewing angle with flat spectral response and no colour shift throughout the whole recommended viewing angle. Designed for 4K Ultra HD applications, it is perfectly suited for use with todays high-brightness high-performance video projectors.

Vision Fold 2

White scratch-resistant surface for front projection

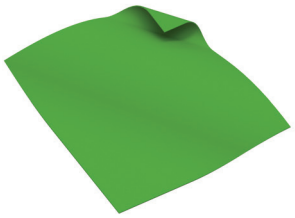

In service and rental contexts, screens are subjected to frequent assembling and dismantling operations, and the surface often remains folded for long periods and in all sorts of climate conditions. These circumstances can damage normal projection materials, impressing marks in the place of the folds. To avoid the "impression effect" Adeo offers Vision Fold 2 , the projection material characterised by greater elasticity.

Vision Fold Rear 2

Grey surface for rear projection

A proposal for the service and rental channel, specific for rear projection. Owing to its outstanding elasticity, this surface resists wear-and-tear and weathering, and withstands the repeated assembling and dismantling operations typical of the applications it is intended for.

Chroma Key

Surface in green color RAL 6038

Chroma key is a technique used in the TV and cinema industries to create special effects, projecting people or objects onto "virtual" backgrounds, being added separately at a later stage.

This solution allows to mix two (or more) videos, using a particular background during post-production, resulting in perfectly merged and synchronized images.

Video projection screens are not designed to be installed in front of windows, near strong sources of light, or at direct sunlight, near heat sources as heating stoves, fireplaces, flues or air conditioning systems for both warm and cold air.

That little something extra

Adeo products distinguish themselves from all the others, owing to a series of special features adopted during the project development and realization phases.
Certain characteristics regard specific aspects of the structure or operation of the screen, such as its projection surface, tensioning, lower bar, roller and motorization; while others are associated with the production itself, such as the automated management of designs and the environmental conditions of the production facilities.
That little something extra that makes all the difference, and endows each model with unique style and superior potential.

Projection surfaces

All the screens that bear the Adeo trademark feature an embossed surface, specifically designed to improve the projection's definition. The result of an extensive research and development process, this characteristic guarantees improved performances, achieving the 4K Ultra HD definition standard.
The edges of the projection surface, where present, are applied with high frequency welding instead of varnishing. This results in greater precision and clear definition between the edge and the surface, and avoids any risk of the colour coming unstuck, being excessively glossy, and other flaws which are typical of varnishing. The welding, carried out on the four sides, is also smoothed on the rear side to prevent any risk of the surface being marked. Particularly resistant through time, the matt black colour of the edges reduces annoying reflected light.
In order to prevent the formation of bothersome folds and warping, the surface is secured to the base by means of two springs placed at its ends.

The projection surface is in fact subjected to constant, albeit imperceptible, expansion and shrinking: the springs neutralize this phenomenon by dampening these movements.
All Adeo screens are equipped with a roller with a double groove, instead of a single groove. This particular structure ensures the constant planarity of the projection surface by avoiding the risk that, in the long run, the surface should marked by annoying horizontal lines impressed by the shape of the roller. In addition, when the surface is applied to the roller, a further process is carried out to avoid any gaps.

Tensioning

Adeo roller screens can be supplied with various tensioning systems.
The classic tensioning system is based on two elastic cables which depart from the base and are threaded through eyelets placed along the sides of the screen: the lateral arches thus formed contribute to ensure a "crease-proof" rolling, despite the presence of the eyelets. For each Adeo screen a calculation is carried out based on the dimensions of the roller's diameter and on the length of the projection surface: hence, from the parametric design the correct distance of the eyelets is automatically calculated so as to ensure that the eyelets do not overlap and to guarantee a smooth, fold-free rolling.
The result is perfect planarity and a harmonious visual impact, ensured by the lateral curve of the surface and by the even spacing between the eyelets. Alternatively, Adeo has developed the exclusive CTS (Constant Tensio System): two counterweights hooked onto hinges attached to the ends of the base stretch rigid cables threaded through eyelets placed along the sides of the screen.

This results in constant self-tensioning through time and neutralizes the risk of folds forming during the screen's rolling, since in this phase the eyelets remain outside the projection surface. This system focuses on the technical aspect: the lateral tensioning produced by the counterweights is totally independent from the vertical tensioning produced by the base. The eyelets of Adeo's Tensio screens are glued to the edge, instead of welded, to avoid the welding being visible from the front.

FTS™ Floating Tensio System and
MFTS™ Max Floating Tensio System

Tensioning system consisting of a double lower bar and tensioning cables. Lower bar consist of two weights, one of which is responsible for the vertical force of the material and the other associated with the tensioning cable system is responsible for the flatness of the material horizontally.

Tensioning of screens with rigid frames is obtained through the insertion of iron rods into the four sides of the projection surface, which are then anchored to various points of the frame by means of elastic cables.

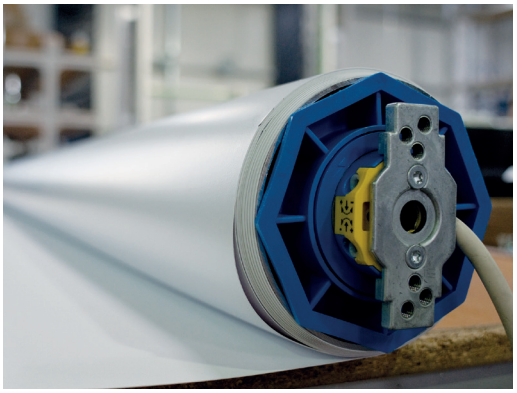

Lower Bar

The screens of the Rugby, Elegance, Professional, Inceel, InSuperior FTS, OnSuperior FTS, Multiformat and Biformat lines are provided with a special lower bar: once the screen is rolled up the case is seamlessly closed and protects the surface from gathering dust when not in use. Not just beautiful, but very practical.

Winding system

The need to reduce the size of the components as much as possible has resulted in the development of a specific structure (for certain models only) in which a smaller-scale diameter teams up with similarly reduced deformation of the canvas and of the roller itself. Depending on the model, 60 to 150 mm diameter rollers are available, in proportion with the size of the canvas to be rolled.

Motorization

The vibrations of the motor are one of the aspects that influence the quality of the product. To avoid this problem, a sheet of rubber has been inserted between the motor and the sides of the case: this prevents the diffusion of vibrations and noise from the motor to the entire case. A “vibration-proof solution”.

For the same purpose, a study has been carried out to establish the correct flexible coefficient of the rubber of the adapters placed at the ends of the tubular motor inside the roller, so as to obtain a material which is sufficiently elastic, yet not subject to expansion which could result in sliding of the motor.

Environmental conditions of the production facilities

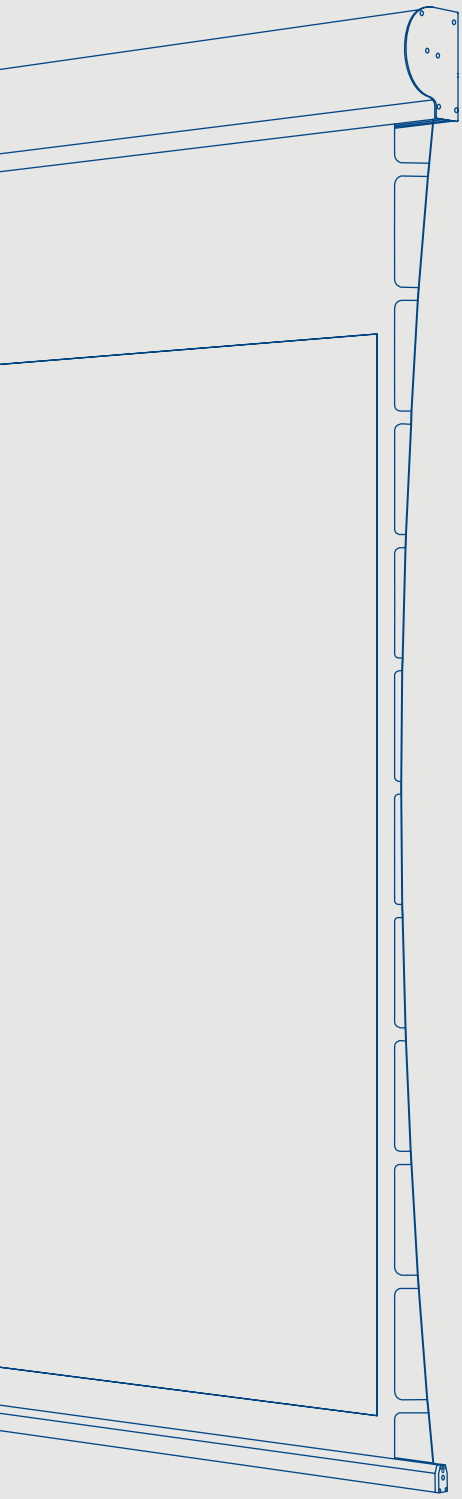

Production takes place in a dedicated and carefully monitored environment. Since treatment of the projection surface requires specific conditions, the ambient temperature is constantly controlled in Summer and Winter to ensure optimal results.

Automated design management

The creation of an Adeo screen involves the automated design management of each model.

The process starts from the job order and the specifications it contains: the data are then processed by CAD software and forwarded to the system’s plotter.

The machine cuts the surface based on the input received. This method is characterized by the greatest flexibility: it enables the production of any type of customized screens and is particularly effective when it comes to the tensioned models.

MOTORIZED TENSIONED SCREENS

This projection screen model has been conceived for residential installations, where design features and attention to details are needed.

In its tensioned version (Tensio Classic), the Rugby PLUS screens are the perfect solution to combine aesthetics, functionality and technical performance.

The Tensio Classic system uses elastic tensioning cables threaded through eyelets, creating a curvature of the projection surface that prevents the formation of folds and puckering and ensures crease-free edges. The black (standard) or white (optional on request) side edges are available in 50 or 70 mm.

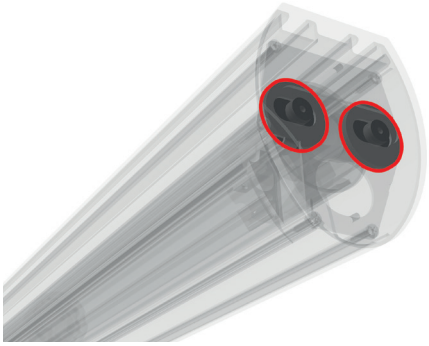

See page 61 for Technical data

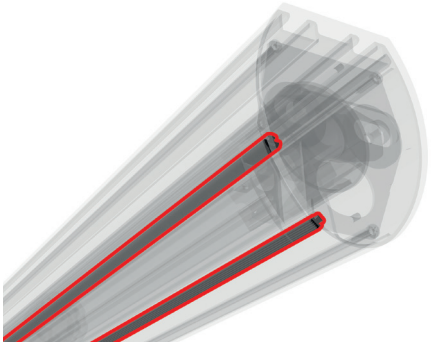

Lowbar design detail

Rugby PLUS Tensio Classic

Quiet Rolling System

Using a double head enables the insertion of rubber bushings to absorb vibrations between the case and the roller. This system reduces the noise of the screen, which will be highly appreciated in residential environments.

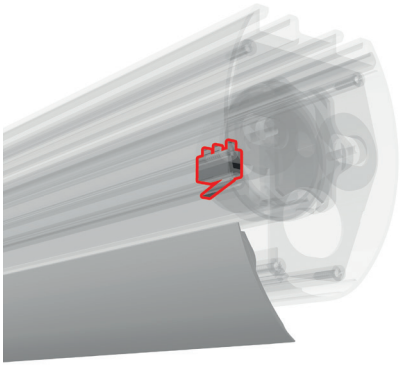

Softend Lowbar System

Designed using soft gaskets that dampen noise and absorb contacts when closing the lower bar.

SuperQuick Bracket Attachment System

The screen is supplied with an improved rapid and user-friendly fixing system for both wall and ceiling mounting. The clamping has been designed adopting symmetrical logics to enable both front and back mounting. The bracket kit consists of a single fixing unit (extruded aluminium bracket) and a single clamping unit (PVC moulded block), significantly reducing the number of parts.

Auto Adjustment System

Another feature of the Rugby PLUS model is the use of a micro switch that ensures that the lower bar is always locked in the same position when closed. This auto-adjustment system means that there is no need for the customer to correct any stretching of the screen over time.

PSS Formats

Rugby PRO

This projection screen model has been developed for the professional channel, where ease of installation, durable materials and simplicity of use are required.

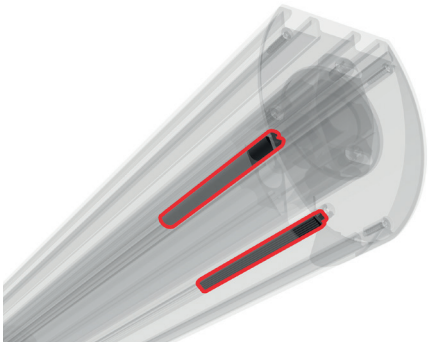

In its tensioned version (Tensio Classic), the Rugby PRO screens are the perfect solution to combine aesthetics, functionality and technical performance.

The Tensio Classic system uses elastic tensioning cables threaded through eyelets, creating a curvature of the projection surface that prevents the formation of folds and puckering and ensures crease-free edges. The black (standard) or white (optional on request) side edges are available in 50 or 70 mm.

See page for Technical data 66

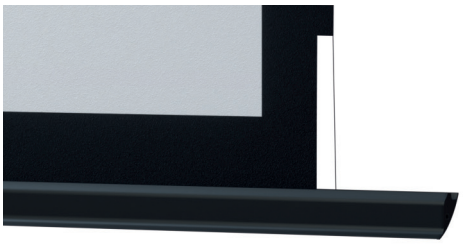

Rugby PRO Tensio Classic

	4:3	16:10	16:9	21:9			

Elegance

The unique style of the Elegance screen comes with two types of tensioning. The CTS (Constant Tensio System) is equipped with two counterweights, hooked onto hinges placed at the ends of the screen base: these tension rigid cables threaded through the lateral eyelets, guaranteeing constant self-tensioning and a smooth, crease-free rolling, owing to the fact that the eyelets are positioned outside the screen's surface. The ideal solution for those who put technical performance first. But since aesthetics are important, there is also the classic system, in which the cables are elastic. Threaded through the eyelets, they create a lateral curve of the surface, which is useful to prevent the formation of creases, despite the presence of the eyelet. In both cases the additional elements maintain the harmonious lines of the lateral sides and of the abutting base. Providing customized aesthetics and optimal planarity in one product.
Available with 50 or 70 mm lateral black borders.

Inceel

Tensio Classic

End plate detail

A screen that has been dubbed “Made for Installation” due to its innovative assembly system. In addition, this model disappears into a false ceiling by means of a retractable mechanism, and is endowed with the classic tensioning method, which ensures a perfect planarity of the surface while safeguarding a harmonious aesthetic impact. Two elastic cables depart from the ends of the base and are threaded through eyelets along the sides of the canvas, creating a lateral arch which avoids the risk of any creases forming during the rolling phase, despite the presence of the eyelets.
While maintaining the characteristic Inceel design, this solution further enhances an invaluable tool for your work and leisure time without posing any space limitations.
Available with 50 or 70 mm lateral black borders.

See page for Technical data 76

Max Inceel

Fixing system for installations in false ceilings, which won't be accessible from the inside.

Fixing system for installations in false ceilings, which will be accessible from the inside.

Max Inceel MFTS is a big size in-ceiling motorized screen studied to disappear into a false ceiling and be visible only when it is in use, representing an aesthetical and functional innovative solution. The tab-tensioned version comes with black borders included and the maximum size available is 568 cm of viewing area.
The very easy mounting system simplify all the installations stages, making this product user friendly, considering the remarcable size. Max Inceel MFTS can be equipped with two different fixing system, according to the intallation needs.
Fixing system for installations in false ceilings, which won't be accessible from the inside.

MFTS™ Patented quality tensioning system
Tensioning system consisting of a double lower bar and tensioning cables. Lower bar consist of two weights, one of which is responsible for the vertical force of the material and the other associated with the tensioning cable system is responsible for the flatness of the material horizontally.

InSuperior

FTS™ Floating Tensio

Adeo Screen's innovative in-ceiling model InSuperior FTS, with newly designed casing that can be integrated into a ceiling or false ceiling, features the new tensioning system with double lower bar and patented FTS™ Floating Tensio System.
A weight-efficient structure that eliminates deformation of the roller assembly structure allows to use more rigid fabrics and in larger sizes, offering the option of longer custom drop combinations.
This screen solution also allows a more convenient and quick installation thanks to the improved new installation brackets and the new lateral cover with magnets system. In addition the casing is provided with new safety cables.

See page for Technical data 82

OnSuperior

OnSuperior Tensio FTS is the screen born to meet the needs to install screens on very high walls or ceilings and to enable the projection light to be lowered to suit the spectator correctly.
The newly designed casing is suitable for on-wall or on-ceiling installation, features the new tensioning system with double lower bar and patented FTS™ Floating Tensio System
OnSuperior is available with a viewing area base up to 4500 mm and can also be supplied in a tensioned version without black borders.

See page 83 for Technical data

FTS™ Patented superior floating tensioning system
Tensioning system consisting of a double lower bar and tensioning cables. Lower bar consist of two weights, one of which is responsible for the vertical force of the material and the other associated with the tensioning cable system is responsible for the flatness of the material horizontally.

Multiformat Tensio Classic

A wide choice of formats, also in the tensioned version, with the Multiformat screen: surpassing the highest expectations of home cinema lovers.

Starting from two independent projection surfaces (a top masking surface and a rear projection surface), attached to two rollers: by synchronising these you can vary the format of the projection area, and obtain an image which is always edged in black, enhancing contrast. These are special, non-varnished anti-reflective black edges, with a width of 70 mm (while traditional edges are 30 or 50 mm wide).

The top surface is directly in contact with the rear surface, thanks to the vertical alignment of the rollers: this avoids the formation of shadows during projection. Planarity is ensured by the front drop of the surface, while the special anchoring to the roller eliminates any risks of horizontal crease marks. A perfect surface is possible at all times, thanks to a dedicated command that unrolls the surface completely, to facilitate cleaning operations. The winding is through Nice Era Mat radio integrated motors with remote control included.

The case is white (RAL 9016), with brushed aluminium lateral ends, which completely mask the screws. The anchoring system is simple and super-quick, for easy installation procedures.

See page for Technical data 84

Brushed Aluminium Ends

There is a very ample variety of formats to choose from.

For projectors with a 4:3 aspect ratio the following formats are available:

> 1.33 NTSC PAL 4:3
> 1.60 16:10
> 1.78 HDTV 16:9
> 1.85 Wide
> 2.35 Cinemascope 21:9

For projectors with a 16:9 aspect ratio the following formats are available:

> 1.78 HDTV 16:9
> 1.85 Wide
> 2.35 Cinemascope 21:9

Two more formats, with height lower than that of the starting format, can be added according to choice.

Numerous solutions, but only one tensioning system: a classic. Two elastic cables depart from the base and are threaded through dedicated same-size eyelets, placed along the sides of the screen: the arch that forms laterally ensures a harmonious aesthetic impact and a crease-free rolling, despite the presence of the eyelets.

Create your own screen with the PSS

Biformat

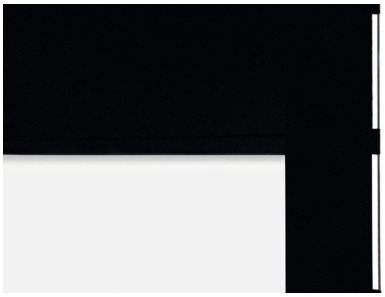

Biformat Tensio is a screen designed to meet even the highest expectations in the home cinema market. This is achieved thanks to a technical profile and a unique tensioning system. Inside the same case are two distinct projection surfaces of different formats, bordered with special non-varnished anti-reflective black edges. These enable to enhance the contrast of the projected image much more effectively than traditional 3 cm edges.
In addition to being positioned in direct contact with each other, to avoid focus loss, the projection surfaces are fixed to the roller, in such a way as to eliminate all risks of annoying horizontal crease marks. Furthermore, the front drop of the surface and the vertical alignment of the rollers ensure planarity. The motorized rolling is controlled through a wall-mounted switch or an integrated radio receiver.
The case is white (RAL 9016), with brushed aluminium lateral ends, which completely mask the screws. Owing to the practical anchoring system, use is immediately possible.

All you need to do is choose among the available formats:

> 1.33 NTSC PAL 4:3
> 1.78 HDTV 16:9
> 2.35 Cinemascope 21:9

All of them boast perfect tensioning, thanks to the classic tensioning system. Two elastic cables depart from the base and are threaded through dedicated same-size eyelets, placed along the sides of the screen: the arch that forms laterally ensures a harmonious aesthetic impact and a crease-free rolling, despite the presence of the eyelets.

Alumid

Tensio CTS

Marked by the quality of its in-built roller and solidity of the entire structure, this screen can be used in the Tensio version. The CTS (Constant Tensio System) provides constant self-tensioning through time, obtained through two counterweights hooked onto hinges at the ends of the screen's base, which tension the rigid cables threaded through the lateral eyelets. During screen rolling the eyelets remain outside the edge of the surface, thus avoiding the formation of annoying creases
A must for providing high quality projection even in large-scale environments and in the presence of a vast audience.

Max One

Max One MFTS, is the new maxi screen from Adeo Screen renewed and perfected, it comes with open casing underneath, also available with optional “casing closure”, to close off the housing completely.
Designed for practical installation, thanks to quick and easy assembly system.
The screen is also equipped with a safety roller fall system to avoid in any case the fall of the rolling tube.
Max One MFTS is the ideal solution for excellent large projection, even in the largest places, maximum size available 5.64 m viewing area.

See page 92 for Technical data

MFTS™ Patented quality tensioning system

Tensioning system consisting of a double lower bar and tensioning cables. Lower bar consist of two weights, one of which is responsible for the vertical force of the material and the other associated with the tensioning cable system is responsible for the flatness of the material horizontally.

Basic

Tensio CTS

Integrated motorized tensioned screen without casing.
This screen has been developed for professional installation, where the casing is not required.
Easy to install with installation brackets into the sides, is a screen that can be placed on wall or on ceiling in almost every spaces.
Basic Tensio can count on the CTS (Constant Tensio System), which ensures the constant self-tensioning of the screen by means of two counterweights hooked onto hinges placed at the end of the screen lower bar, devised for tensioning rigid cables threaded through lateral eyelets.
The screen can be supplied with standard motor or in RI version, with all surfaces available for motorized screen version and in version tensio all white.

See page for Technical data 95

MOTORIZED NON-TENSIONED SCREENS

Rugby PLUS

The Rugby PLUS motorized screen has been developed for home installations where design, attention of detail and functionality are nowadays a must-have.

In this model, the side heads are composed of two parts which are made of milled aluminium and have a magnet fixing system that conceals the internal heads where the roller and motor are mounted, thus making the screen trim and linear.
The insertion of rubber bushings for the absorption of vibrations between the case and the roller ensure a noiseless product, greatly appreciated in residential environments.
This screen model has an improved fixing system that allows symmetrical installation regardless how the surface falls (front or rear).
Rugby PLUS also comes with an automatic lower bar locking system that guarantees perfect closure of the case.

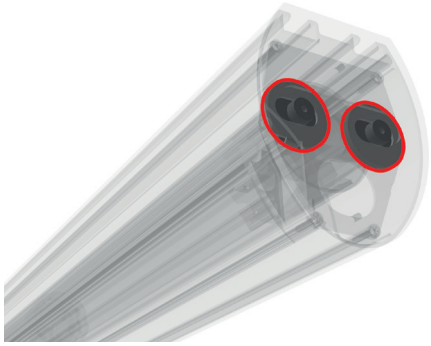

Lowbar design detail

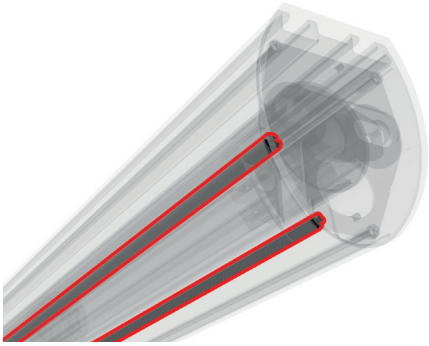

In the Rugby range, rollers of different diameters are used based on the size of the projection viewing area. Rolls of 90 mm are mounted on sizes over 2500 mm and up to 4500 mm of viewing area width. In the non-tensioned version, the Rugby PLUS screens are available with or without edges.
Case and lower bar are available in matt white or matt black.
Back fall for the surface is the standard. Front fall or reverse-roll are also available as options.
Motor is on the right side (standard). It can also be ordered on the left side (optional).

See page 63 for Technical data

Quiet Rolling System

Using a double head enables the insertion of rubber bushings to absorb vibrations between the case and the roller. This system reduces the noise of the screen, which will be highly appreciated in residential environments.

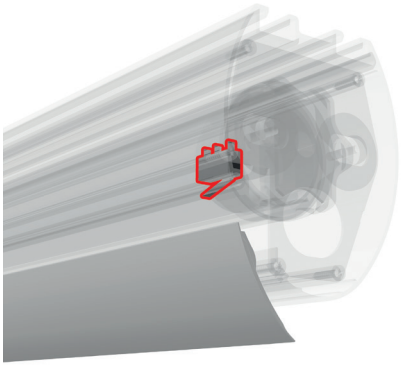

Softend Lowbar System

Designed using soft gaskets that dampen noise and absorb contacts when closing the lower bar.

SuperQuick Bracket Attachment System

The screen is supplied with an improved rapid and user-friendly fixing system for both wall and ceiling mounting. The clamping has been designed adopting symmetrical logics to enable both front and back mounting. The bracket kit consists of a single fixing unit (extruded aluminium bracket) and a single clamping unit (PVC moulded block), significantly reducing the number of parts.

Auto Adjustment System

Another feature of the Rugby PLUS model is the use of a micro switch that ensures that the lower bar is always locked in the same position when closed. This auto-adjustment system means that there is no need for the customer to correct any stretching of the screen over time.

Rugby PRO

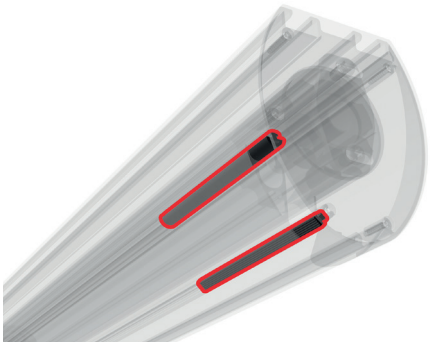

The Rugby PRO rolling screen has been designed for the professional channel, where ease of installation, durable materials and simplicity of use are required.

In this product line, the heads and lower bar are made of laminated iron to make the screen extremely robust.
The aluminium case has been designed with an innovative interlocking system that reduces the transmission of vibrations from the motor, limiting the noise when operating the screen.
The fixing system has been completely innovated and allows symmetrical installation with both front and back screen fall.

In the Rugby range, rollers of different diameters are used based on the size of the projection viewing area. Rolls of 90mm are mounted on sizes over 2500mm and up to 4500mm of viewing area width.
In the non-tensioned version, the Rugby PRO is available with or without edges.
Case and lower bar are available in matt white or matt black.
Back fall for the surface is the standard. Front and reverse-roll are also available as options.
Motor is on the right side (standard). It can also be ordered on the left side (optional).

See page 68 for Technical data

Elegance

A fitting name for a model with a refined design and rounded lines. The secret lies in the case: its lateral ends made of pressure die-cast aluminium hide the fastening screws from sight and, once the screen is rolled up, the lid-like screen base forms a seamless whole with the case itself.
The product's attention to detail is matched by its versatility: Elegance is the ideal solution for installations which involve specific aesthetic requirements and need personalized adjustments.
Style and easy installation team up to provide a complete product, which is suitable for any environment.
Available with 50 or 70 mm lateral black borders.

Inceel

When aesthetics are a vital necessity in the décor of your home and office spaces, Adeo responds with Inceel, the screen that is visible only when it is in use. Owing to the innovative assembly system the structure is positioned inside a false ceiling and the characteristic threaded bars are height-adjusted by means of a thread lock to suit individual practical requirements. This technique allows a quick and straightforward installation at a reasonable cost, whether carried out autonomously or by third parties.

Practicality meets aesthetics: by applying two plugs on the ends of the case the anchoring system is hidden and the visual impact significantly reduced, thereby favouring an overall harmonization with the surrounding ambient.

Inceel is the ideal solution for enjoying total and uncluttered freedom in one's home or office spaces: the screen is there but it doesn't show.

Available with 50 or 70 mm lateral black borders.

PSS Formats

Multiformat

Multiformat was especially created by Adeo for real connoisseurs of home cinema. This screen is distinguished by the presence of two independent projection surfaces (a top masking surface and a rear projection surface), attached to two rollers: by synchronising them the format of the projection area can be varied, to obtain an image which is always bordered with black edges, enhancing contrast. These are special, non-varnished anti-reflective black edges, with a width of 70 mm (while traditional edges are 30 or 50 mm wide).

It is important to note that the top surface is directly in contact with the rear surface, thanks to the vertical alignment of the rollers: this avoids the formation of shadows during projection. Planarity is ensured by the front drop of the surface, while the special anchoring to the roller eliminates any risks of horizontal crease marks. A perfect surface is possible at all times, thanks to a dedicated command that unrolls the canvas completely, to facilitate cleaning operations. The winding is through Nice Era Mat radio integrated motors with remote control included.

The case is white (RAL 9016), with brushed aluminium lateral ends, which completely mask the screws. The anchoring system is simple and super-quick, for easy installation.

Alumid

Alumid: large-scale formats for a unique style. Designed for screens with bases sized over 3.5 m, this model is equipped with the trademark built-in 108 mm diameter aluminium roller, contained in a case which is open underneath, for easy rolling of larger-scale screens. The result is an excellent tensioning of the projection surface. This product is also interesting from the installation point of view, which is based on the quick-assembly system, an operation which can be carried out autonomously and with significant time saving.
Sit back and enjoy the results: theatres, congress centres, auditorium spaces, Alumid ensures a striking projection performance even in the most challenging spaces.

Max One

Max One, is the new maxi screen from Adeo Screen renewed and perfected, it comes with open casing underneath, also available with optional “casing closure”, to close off the housing completely.
Max One is the solution for very large projection, used for large scale applications.
Designed for practical installation, thanks to quick and easy assembly system.
The screen is also equipped with a safety roller fall system to avoid in any case the fall of the rolling tube.

Big One

Designed for large installations in theatres, conference rooms and in all those spaces that require large projection, Big One is available in 4:3, 16/10 and 16/9 native aspect ratios. Depending on the chosen format, the total dimensions range from 700 to 850 cm in width of the viewing area, with a diagonal of 345 to 384 inches.
The Big One can be equipped with Vision White projection surfaces, characterized by a wide viewing angle, high brightness and absence of hot spots, and with the two acoustically transparent surfaces Vision Acoustik and Vision Macro Acoustik.

Linear SE

Linear SE model dedicated to those who wish to get a competitive price product without forfeiting quality. Linear SE is a new motorized model with renewed aesthetics and a modern super-quick installation system. Technology and ease of installation are the main plus of this version, dedicated to professional installations, schools and small meeting rooms.
This screen model has not been conceived to be installed on-ceiling in the middle of a room; it will have to be installed against a wall.
Available with dimensions from 1.8 to 2.6 m viewing width in formats 1:1 / 4:3 / 16:9 / 16:10

See page 100 for Technical data

FIXED SCREENS

Plano | Plano Velvet

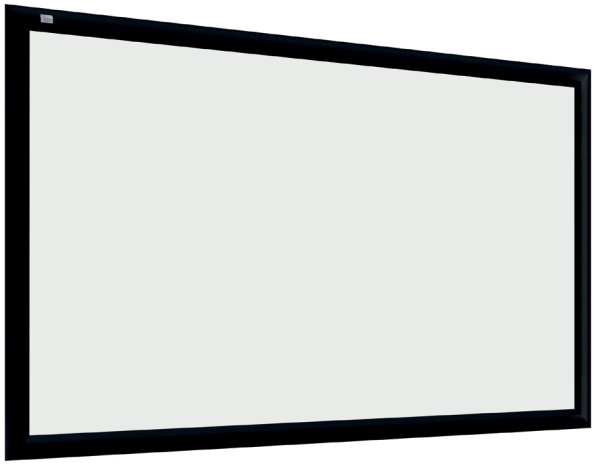

Plano

One of the most annoying effects on vision is caused by light reflecting off the frame of the screen. Extensive research into the structure of the profile, both from a functional and an aesthetic point of view, has resulted in the creation of Plano, the screen equipped with a special aluminium frame, angular on the internal side.
A solution designed to direct the reflection towards the outer edges of the screen instead of the projection surface or the audience. The profiles can be painted black, or coated in a velvet flock finish, which totally absorbs light and enhances the perception of contrast in the projected images. Tensioning is provided by elastic cables, which guarantee the perfect planarity of the surface, preventing any risk of undulation.

See page for Technical data 101

The main applications of this product are in the Home Cinema sector; its use in the domestic environment is favoured by a harmonious design and by the installation system incorporated into the profile: the wall-mounted bracket slides into the back of the frame and disappears, ensuring the total adherence of the frame to the wall.

Plano Curved

An unique video experience for all home-cinema devotees: this aptly sums up this creation by Adeo Screen.
Would you like to immerse yourself completely in your favourite film? Try Plano Curved screen, and recreate that authentic theatre atmosphere: let each video projection surround you with images and become a totally involving emotional and sensory experience.
Plano Curved artfully blends expertise and innovation, incorporating the distinctive features of the Plano model while introducing a characteristic curved profile.
In addition to the product's outstanding perfomance, there are fundamental technical aspects that we feel should be highlighted: the profile's curvature and the optimal projection radius (based on the screen's dimensions) significantly improve the image's luminance uniformity. This solution can also be adopted with high-gain projection surfaces (such as HeliosWhite and Ambient Grey) with a native 2.35:1 format, eliminating any loss of luminosity at the edges that would normally occur when using a non-curved panoramic screen.
The profile's special black-velvet finish completely absorbs the light, enhancing the perception of contrast in the projected images. Available in 4:3, 16:10, 16:9 and 2.35:1 formats.

FrameLess

FrameLess: the stylish screen. FrameLess is a borderless model whose sophisticated aesthetics create an optical illusion, with the screen blending into the wall on which it is mounted.
The projection surface hides the back frame from view, lending the screen a linear and minimal appearance.
What is immediately striking about FrameLess is the use of an innovative structural solution featuring a special aluminium profile (108x32 mm) that prevents distortion and ensures absolute flatness of the projection surface.
Tensioning being a key factor during projection, we have implemented a system for anchoring the canvas with metal springs that keep the projection fabric firmly stretched over time, avoiding any risk of rippling or creasing.
FrameLess is ideally suited both for home installations - where a width of up to 4 m is usually the most in demand - and for professional environments, such as hotels, meeting or conference rooms, where a base size of up to 7 m is required.
FrameLess is available with all our front-projection surfaces and comes with a magnet anchoring kit for wall-flush installation.

See page for Technical data 102

FrameLess Curved

An enveloping image is more involving. This is why we developed the curved version of FrameLess – for a totally immersive experience.

Capturing the viewer's attention with its curved screen, this is an admirable product that blends seamlessly into an elegant ambience while delivering high-quality images.

The aluminium profile (108x32 mm) prevents warping and ensures even greater flatness of the projection fabric, which is fastened to the back of the profile by a system of metal springs. This additional feature helps avoid any ripples or creases.

With the projection fabric covering its entire frame, FrameLess Curved engages in a dialogue with the surrounding wall and enhances the room like a furnishing accessory.

The effect is one of practical lightness.

Sizes range from 2 to 6 m and can be fitted with front-projection fabrics.

Prestige

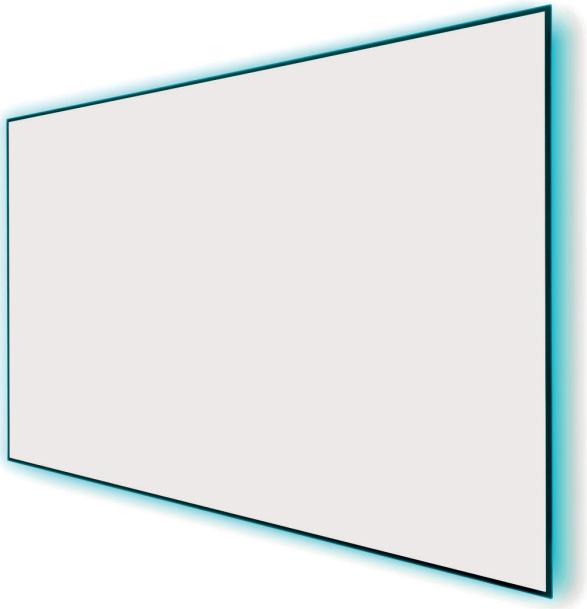

This model of our fixed-screen category evokes contemporary charm and quality. The concept underlying the modern design of the Prestige project focuses on regular, essential geometric forms. Prestige distinguishes itself through its black, ultra-slim, technologically revisited aluminium frame of only 10x6 mm in thickness, of extreme linearity, expressing the latest taste in the LED OLED monitors market.

To meet the needs of our Customers, this model can be fitted with a range of front-projection fabrics featuring a spring-tensioning system that ensures correct and constant tensioning.

To highlight certain details or to introduce an element of colour, Adeo Screen proposes the installation of optional LED back-lighting for a touch of illumination that lends warmth to the wall.

FramePro

A screen that offers a fourfold service. Following in the footsteps of Frame, FramePro features a structural aluminium frame – divided into several parts for easier transport – and particularly robust and hard wearing angles, which add solidity to the assembly. This model distinguishes itself by enabling four different types of configuration: depending on the chosen version, the projection surface can be front or rear mounted, by means of the traditional elastic bands or with snap buttons.

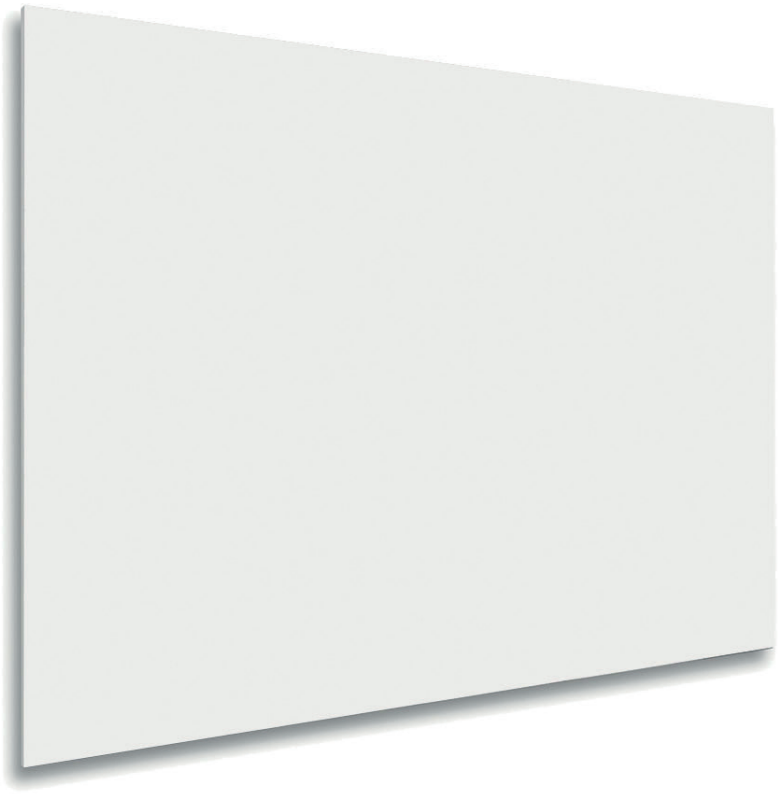

An additional option is the black flocked frame: the velour finish completely absorbs any light and enhances the perception of contrast in the projected images.

Unprecedented versatility, for the most demanding spectator and for the most atypical situations.

FramePro FE

▲ Easy projection surface installation thanks to elastic bands and rods

FramePro Front Elastic Bands
Version with front-mounted projection surface, applied with elastics

The best response to aesthetic demands and to the expectations of minimalist architecture: the projection surface conceals the structural parts of the screen, harmonising discreetly with the surrounding ambience.
The wall mount (all sizes) includes spacers: this solution has been designed especially for easy installation, and to separate the screen from the wall by a couple of centimetres where necessary (e.g. in case of backlighting). Alternatively, floor assembly is possible by means of specific professional stands. Sizes are customisable. The profile can be divided into several parts.

FramePro FB

FramePro Front Buttons
Version with front-mounted projection surface, applied with snap buttons

Particularly suitable for service, this proposal meets the expectations of those who prefer to apply the projection surface by means of snap buttons. A black edge is applied all around the border (where the buttons are), hiding any signs of wear resulting from repeated use, and typical of rental contexts on the profile (which is divided in several parts).
The screen can be installed by means of professional stands (floor assembly); on aluminium trusses; wall-mounted (all sizes) with a mount system integrated into the profile (the wall brackets are inserted into the rear part of the frame, ensuring complete adherence).

See page for Technical data 104

FramePro RE

FramePro Rear Elastic Bands
Version with rear-mounted projection surface, applied with elastics.

This screen (all sizes) is installed flush with the wall, owing to the mounting system integrated into its profile, which conceals the assembly structure (the wall-mounted bracket inserted into the rear part of the frame). Ideal for fixed installations, and particularly for home theatre applications, it blends in harmoniously with the surrounding environment. This version is available with black varnished or flocked profile. Floor assembly can be achieved by means of professional stands. Sizes are customisable. The profile can be divided into several parts.

See page for Technical data 105

FramePro RB

FramePro Rear Buttons
Version with rear-mounted projection surface, applied with snap buttons

Dedicated for those who prefer to apply the projection surface with snap buttons. Wall flush installation is possible with all sizes, owing to the integrated mount system with wall-mount brackets inserted into the rear of the frame.
In addition, infinite applications are also possible in the rental sector, thanks to the floor assembly (achieved by means of professional stands), or the aluminium truss option. Sizes are customisable. The profile is available in flocked or black varnished versions, and can be divided into several parts.

Ample open spaces, sumptuous shows, highly effective installations: meet Cinema.
Our careful research into materials has led to the creation of extremely robust profiles capable of sustaining a base size of up to 24m. The screen has been further improved with the inclusion of structural bars every 4 or 5m, increasing the stability of the inner structure. Even the fabric-anchoring system has been redesigned to make assembly operations quicker and simpler: a very important aspect when mounting such imposing screens.
To lend the frame a modern look and to ensure it harmonises with its surroundings, the aluminium frame is completely enveloped in the fabric, which is fastened directly to the frame via a new anchoring system.
Cinema can be equipped with front-projection surfaces of the Adeo Screen range which, in products of this size (base width from 7 to 24 m), are welded vertically.

See page for Technical data 106

Cinema Curved

Cinema Curved is a new born in the family of fixed installation screens.
This new product, designed for wide open spaces and spectacular projections, engages the viewer with high-quality images and an exciting, high-impact cinema experience.
The fabric-anchoring system has been designed to make assembly operations quicker and simpler.
The alluminium frame is completely surrounded from the screen fabric, which is fastened directly to the frame structure through a new anchoring system.
Surface is always welded on the vertical side
Cinema Curved screens are produced in sizes from 7m to 24m.

See page for Technical data 107

- Unipolar switch

Optional Accessories

- 1 screen interface and 1 lift scree interface to drive both in radio frequency with 2 channels remote control (not included), 12V trigger, unipolar switch, dry contact or RS232
- Extension brackets for screens up to 60 cm

Easy Surface

Versatility, practicality, and above all efficiency and excellent performance: in the service and rental contexts, tools are fundamental and must fulfil all of these requirements. When it comes to screens, the solution is Easy, the surface designed especially for rental, and particularly for use with aluminium truss structures. Iron rods are inserted into dedicated hems along the four sides; in various points along the perimeter formed by these iron rods, elastic cables anchor the screen to the aluminium truss. This system prevents any warping or distortion of the projection surface. The tensioning can be further personalized through a choice of elastic cable sizes.
The product is sold with a kit of 20 cm elastic cables; kits for special installations are available on demand with 35 and 55 cm cables. In order to optimize the packaging and transportation of the screen, the iron rods to be inserted into the base are always divided into two halves; one-piece rods are also available for the other three sides, depending on the end user's individual requirements.

Round

Round is the screen with a reduce curvature especially designed for simulators.
The screen has a 64x36.5 mm alluminium structure on which the projection surface is mounted with a system of metal springs that guarantees the correct surface tension.
Round was developed to meet a growing demand for simulator solution ideal for installations in control rooms, museums and in virtual reality contexts. Available in the full choice of surface of fixed screens range.
Suitable for floor installations only.

Create your own screen with the PSS

> **Personalized dimensions:** width and height
> **Profile color:** Black Matte

Projection Surfaces (see page 6)

> Reference White 2 / Reference Grey 2 / Reference White 2 Acoustik / Reference Grey 2 Acoustik
> Ambient Grey 2 / Ambient Grey / Ambient Grey 2 Acoustik
> Vision White / Vision White Pro
> Vision Acoustik / Vision Macro Acoustik

Standard Accessories

> Kit with floor-mount legs and brackets
> Kit containing springs, iron rods and fabric angles (for precise finishing) for the assembly of the surface
> For the assembly of the frame: angles and joints (where applicalble) complete with screws

Optional Accessories

> Fixed floor legs to create distance from floor to the screen

Custom sizes are available upon request

For screens with a viewing width of 3500mm (for the 1:1 format only) and from 4000mm to 4500mm, a roller with a diameter of 108mm is provided.

For screens with a viewing width of 5000mm and above, a roller with a diameter of 150mm is provided.

INSTALLATION SYSTEMS AND ACCESSORIES

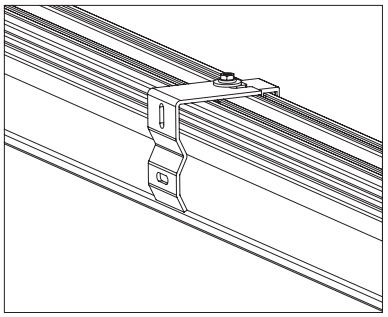

Standard and quick installation systems

The screens of the Elegance and Professional lines, also in the Tensio CTS and Tensio Classic versions, are mounted with two different types of installation, which allow different configurations to suit the various types of applications.

The standard assembly system focuses on aesthetics, and hides the support structure from sight. First of all the standard support device is secured to the bracket with a screw and hooked onto the profile. Then the plastic wrench is used to fasten the bracket in the optimal position: the assembly is finally tightened with a nut (see picture on the right).

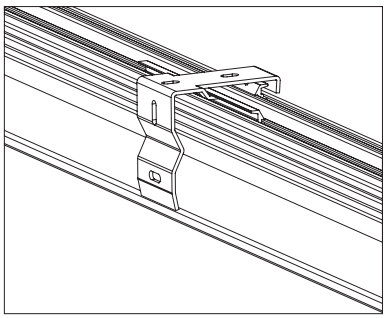

Standard ceiling installation

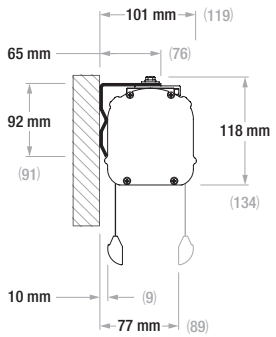

Standard wall installation

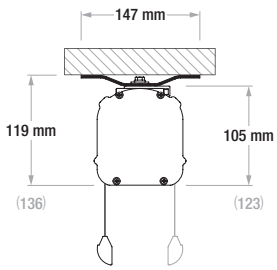

The optional quick assembly system is simpler and faster, and ideal for the professional installations. Just anchor the 4 cm and 20 cm hooks of the case into the single (wall- or ceiling-mount) bracket and finally block the screw. To facilitate these operations it is advisable to partially tighten the nut before proceeding with the alignment.

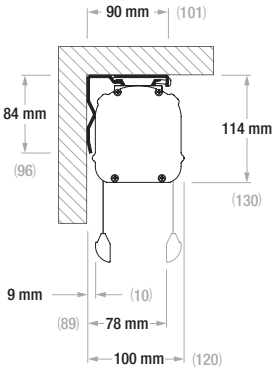

Quick installation

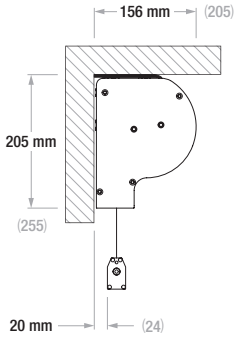

Installation of 103 (and 119) mm case screens

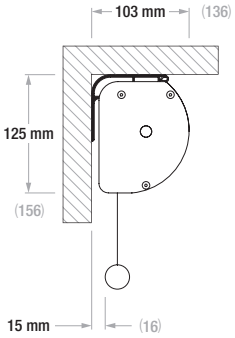

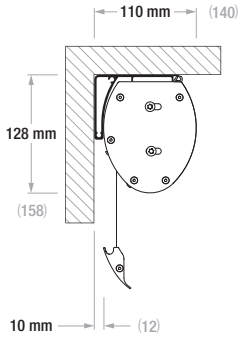

Installation of OnSuperior screens with 90 (and 120) **mm rolling tube**

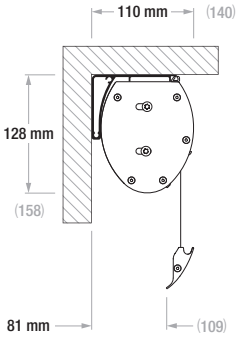

Installation of Linear SE screens with 61 (and 90) **mm rolling tube**

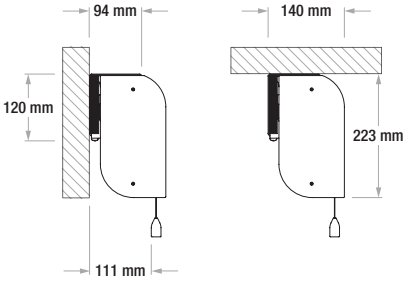

Installation of Rugby PLUS and PRO screens with 61 (and 90) **mm rolling tube**

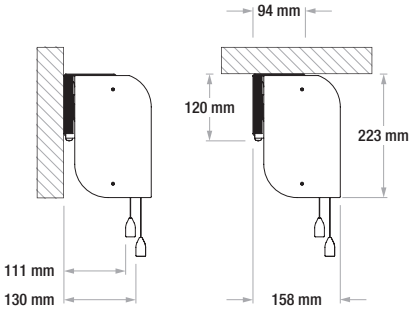

Installation of Rugby PLUS and PRO screens with 61 (and 90) **mm rolling tube with front fall**

Installation of Multiformat screens

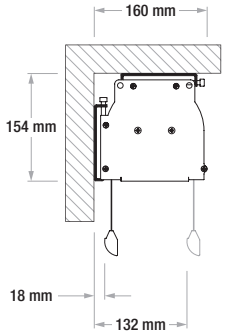

Installation of Biformat screens

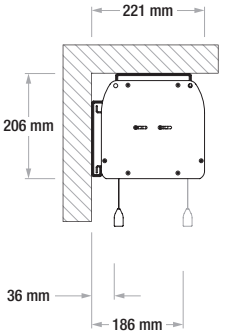

Installation of large-scale screens

The Alumid screen, whether wall- or ceiling-mounted, is installed exclusively with the quick method, with front or rear surface drop. The structure of the case enables immediate anchoring to the bracket.

Same type of case and same installation method also for big brother Max One: quick wall- or ceiling-mount, with front or rear drop of the canvas. The version without case is supplied with two side brackets for wall and ceiling mounting and use a pivot with a range of 70 mm to make the installation easier.

The range of Adeo screens is complemented by a series of accessories for use during installation or for personalizing the control of the operative phases.

Screen's remote control interface
(RF, RS232 and Trigger)

The Adeo control interface has been designed to control the screens' various motorisations via different command modalities.
The hardware card features two types of connection: the first enables the connection of a two-phase motor to a common-forward-reverse-ground cabling; the second connects Adeo screens equipped with radio integrated motors. The interface can be used in the following modalities:

> Radio Frequency (RF)
> 12V Trigger
> Low voltage dry contacts via relay or RS232

Remote controls used with interfaces

Remote controls to manage 1 or more screens.

***Way* portable supports**

Supports for inserting *Way* remote control. Adeo offers an extensive range of models for every kind of furnishing: shockproof supports for tabletop and wall-mount (white), oval shockproof supports for tabletop (available in white or transparent) and square or rectangular wall-mount holder (available in aluminium, white, graphite, black, transparent, and aqua green).

Infrared receiver and remote control
(for motorized screen)

Compatible with screen models with standard mechanical motor.
The kit is composed of a receiver control unit,external IR receiver with connection cable (1 m) and transmitter.

External RF unit

Compatible with any mechanical motor

The kit is composed of a RF receiver control unit and a 12V Wireless Trigger.

The kit is composed of a RF receiver control unit and a Syncro Power Relay.

Extension brackets for rolling screens

Extension brackets available in glossy powder-varnished white (RAL 9010) for standard brackets supplied for anchoring all types of screens, to be applied in the presence of obstacles on the wall or ceiling. Available in the following sizes: 360 mm (up to 180 kg), 450 mm (up to 120 kg), 520 mm (up to 70 kg), 600 mm (up to 90 kg) and 750 mm (up to 70 kg). Weights and sizes refer to a single bracket. The use of more extension brackets allows a higher load-bearing capacity: for example, three 360 mm extensions can bear a weight of 540 kg.

Adjustable legs for FramePro and Plano screens

Pair of professional floor legs for fixed screen models FramePro and Plano. The legs are height-adjustable from a minimum 80 cm to a maximum 284 cm.
Suitable only for fixed screens with maximum height of 204 cm.

Adeo Screen Sp. z o.o. reserves the right to modify its products and technical data at any time without prior notice.
All technical data in this catalogue is updated based on the Adeo Screen Price List Version May 2023.

Dimensional tolerance

All projection surfaces used for manufacturing video projection screens are made of PVC or plasticized fiberglass.
Such surfaces are sensitive to temperature and humidity, and therefore the accepted dimensional tolerance is of 1% on every dimensions.

Dimensional tolerance on alluminium profiles are of +/-2 mm.

Dimensional tolerances on overall widths are
+/- 3 mm till 2500 mm overall width
+/- 5 mm till 4000 mm overall width
+/- 10 mm till 8000 mm overall width
+/- 20 mm till 16000 mm overall width
+/- 30 mm till 24000 mm overall width
